WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

***** High Risk NE CA and Far Eastside for Sunday afternoon and evening due to SW-W gusts to 35 mph and low Relative Humidity (RH) *****

Some sort of Pacific trough will affect the region during the next several days. The main impact will be periods of gusty winds coupled with low to marginally low humidity ranging between the teens and 20's during the afternoon's. The windiest periods appear to be Sunday and the middle of next week due to reinforcing energy into the semi-permanent trough.

Winds will be breezy at times across the north and east as well as within the Delta region this afternoon and evening...general peak gusts to 25 mph. The bigger wind flow will come Sunday. Expect W-SW gusts up to 35 mph along and east of the Cascade and Sierra Crest as well as portions of Siskiyou and Modoc counties. A drier N-NE wind direction will be found along the Oregon border, especially the higher ridges of Del Norte county the next couple of days.

The wind flow will relax some, but remain breezy at times across the far north and east as well as within the Delta region, early next week before another round of gustier winds most likely impacts the area by the middle of next week. Weather models have jumped around on the timing of this stronger trough energy next week but remain consistent with showing trough impacts. Temperatures during the next several days should be near to a little below normal with better recoveries at night most areas and time frames. Precipitation is not likely at this time during the next 7 days.

SOUTHERN CALIFORNIA

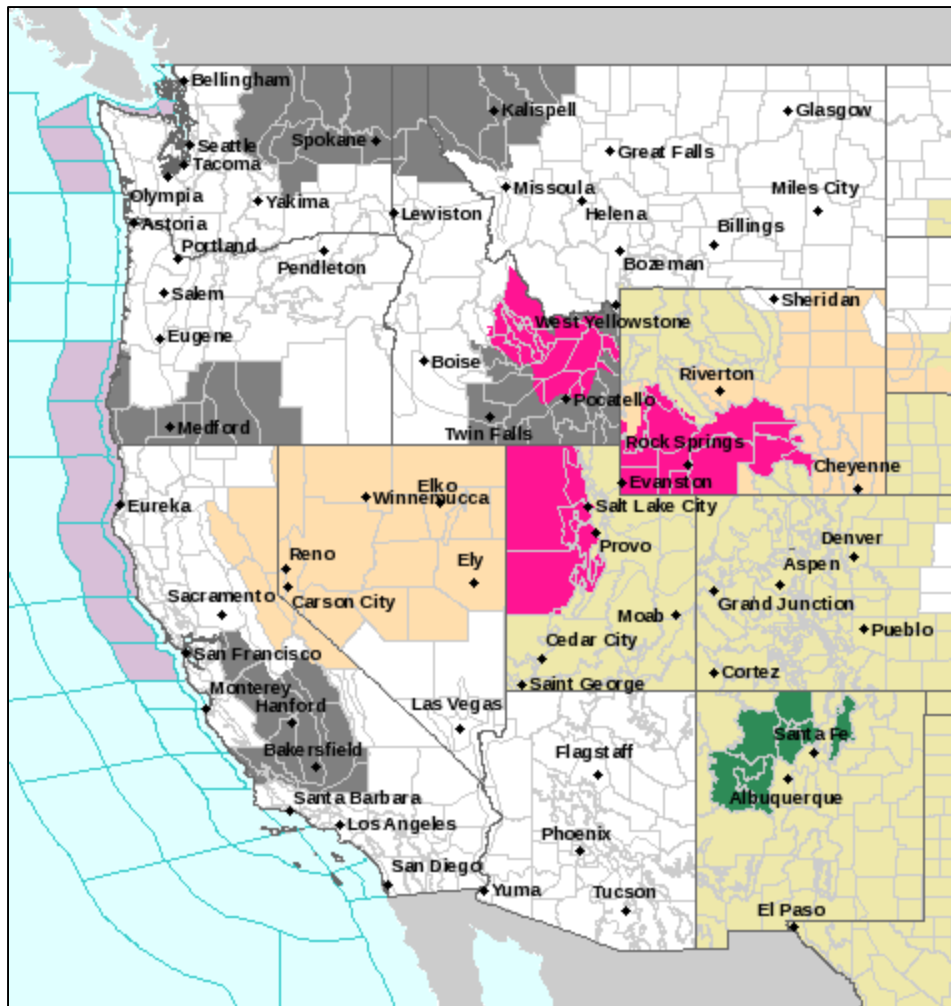

*****Strong westerly winds across the mountains and deserts through the end of next week*****

There will be very little change in the weather through the end of next week as a weak Pacific trough sits over the West Coast. Westerly afternoon and evening winds of 20 to 30 mph with gusts to 50 mph will surface across the mountain ridges and desert passes. Temperatures will be a little below normal, with 70s to low 80s across the mountains and mid 80s to mid 90s in the valleys. Minimum humidity will be mainly between 15% and 30% away from the coast. However, minimum humidity will be between 5% and 15% over some higher mountain and Northern Desert locations.
